A GUIDE TO ICT-RELATED ACTIVITIES IN H2020 WORK PROGRAMME 2018-20
A guide to ICT-related activities in WP2018-20 (2020 update)

ICT in H2020 - an overview

ICT is present in many of the H2020 areas. This guide is designed to help potential proposers find ICT-related topics across the different parts of H2020 in work programme 2018-20.

Like in previous work programmes (2014-15 and 2016-17), actions supported through the last phase of Horizon 2020 will cover the full innovation chain, from basic research to market uptake:

- Advanced research to uncover radically new technological possibilities and ICT contributions to upstream research and innovation are addressed in the ‘excellent science’ part of the work programme, respectively under ‘future and emerging technologies’ and ‘European research infrastructures’ (‘Infrastructures’);
- Research and innovation activities on generic ICT technologies either driven by industrial roadmaps or through a bottom-up approach are addressed in the ‘leadership in enabling and industrial technologies’ (LEIT) part of the work programme;
- Multi-disciplinary application-driven research and innovation leveraging ICT to tackle societal challenges are addressed in the different ‘societal challenges’.

However, although the overall structure of this work programme is similar to previous ones, a few changes need to be taken into account:

- A new part is introduced to implement a pilot of the European Innovation Council (EIC), bringing together several innovation support schemes: the SME Instrument, the Fast Track to Innovation (FTI), FET Open, and Horizon Prizes. Each addresses the needs of a particular community in the innovation ecosystem.
  - Activities aiming at supporting innovative SMEs through the dedicated SME instrument are now all grouped together in a single fully bottom-up topic.
  - As part of the EIC pilot, FET Open should provide a bold exploratory engine that shatters the frontiers of current thinking, and aims at combining high scientific ambition with concrete technological implications.
- While the concept of focus area has been strengthened further, the ‘cross-cutting activities’ part introduced in the previous work programme is now replaced by virtually linked calls.
  - A smaller number of major actions which cut across the programme boundaries are implemented as focus areas. Each of these aligns with major political or policy drivers, and is endowed with a substantial budget to allow for work of sufficient scale, depth and breadth. The linking of topics from different parts of the work programme is achieved through aligning aspects of the implementation such as proposal submission deadlines and evaluation procedures, and also putting in place measures to share information and create synergies between ongoing projects throughout the life-cycle (e.g. publicity, project monitoring). At the same time, the ‘contributing’ calls and topics remain within the structure and logic of their respective work programme parts in Horizon 2020. Overall the expected effect is to get more from the same investment and build critical mass where it is needed.
• The following priorities are addressed through focus areas:
  ° ‘Building a low-carbon, climate resilient future’ (LC) (total budget: 3.7 billion euros),
  ° ‘Connecting economic and environmental gains – the Circular Economy’ (CE) (1 billion euros),
  ° ‘Digitising and transforming European industry and services’ (DT) (1.8 billion euros),
  ° ‘Boosting the effectiveness of the Security Union’ (SU) (1 billion euros), which notably includes activities related to cybersecurity.

• The structure of all work programme parts was streamlined in order to have fewer and bigger calls with high impact, as well as fewer and broader topics, each supporting a balanced portfolio of projects.

The following sections give more details on ICT-related activities in the different parts. A list of the topics of 2018, 2019 and 2020 where ICT’s contribution is the most relevant is also provided in annex (with the main call details).

The detailed description of all these topics can be found in the complete work programme with the references available in the table of the annex.

Note that ICT is also addressed by the European Research Council (ERC) and the Marie Skłodowska-Curie actions, which are not covered in this document.
ICT in 'Excellent science'

1. Future and Emerging Technologies (FET)

FET Open: novel ideas for radically new technologies

FET Open, which represents 40% of the overall FET budget in Horizon 2020, is entirely non-prescriptive with regards to the nature or purpose of the technologies that are envisaged. FET Open covers all technological areas and no budget is specifically earmarked for ICT.

In WP2018-20, FET Open is part of the European Innovation Council pilot and the call text has been simplified for a clearer scope.

FET Open also calls for coordination and support for communication, innovation and horizon scanning.

The FET Innovation Launchpad, which was started in the previous work programme and aimed at stimulating innovation by initiating entrepreneurial activities around results from FET research projects, has been refined to take into account experience from the first call.

FET Proactive: boosting emerging technologies

Two calls are proposed in FET proactive, one specifically addressing international cooperation High Performance Computing and another one entitled ‘Boosting emerging technologies’, with its main topic for 2020 (FETPROACT-EIC-07-2020: FET Proactive: emerging paradigms and communities) covering three different emerging areas.

Amongst the two other topics of this second call, one proves particularly relevant to ICT, since it is aims at supporting community building in Neuromorphic Computing Technologies.

FET Flagships: tackling grand interdisciplinary science and technology challenges

The two flagships launched in 2013, and already addressed in the previous work programmes, will be further developed and supported (the Graphene flagship, and the Human Brain Project (HBP)) while the support to a third flagship on Quantum Technologies will be initiated.

2. Research infrastructures

e-Infrastructures

The Research Infrastructures part of work programme 2018-20 will provide support to actions included in the 2016 Communication from the Commission on the European Cloud Initiative, in particular to further integrate and consolidate e-infrastructure platforms, to connect the ESFRI (European Strategy Forum on Research Infrastructures) infrastructures to the European Open Science Cloud, and to develop a European Data Infrastructure (EDI). This will mainly happen through the four following calls:

- ‘Implementing the European Open Science Cloud’,
- ‘Integrating and opening research infrastructures of European interest’,
- ‘European Data Infrastructure’,
- ‘Demonstrating the role of Research Infrastructures in the translation of Open Science into Open Innovation’. ¹

¹ COM(2016) 178 : European Cloud Initiative - Building a competitive data and knowledge economy in Europe
ICT in ‘Leadership in Enabling and Industrial Technologies’

Compared with previous work programmes, the structure of the section of the ‘Leadership in Enabling and Industrial Technologies’ pillar which is dedicated to ICT has been revised and aligned with the main political priorities in the digital area:

- Artificial Intelligence and Technologies for Digitising European Industry and Economy,
- European Data Infrastructure (EDI),
- 5G and Connected and Automated Mobility,
- Next Generation Internet (NGI),
- Cybersecurity.

The corresponding activities are mainly covered through three calls:

- a generic call on Information and Communication Technologies,
- a call dedicated to the implementation of the DEI (Digitising European Industry) strategy (through support to digital innovation hubs, the development of platforms and large-scale pilots) and the contribution of LEIT-ICT to the DT focus area of WP2018-20,
- a call on cybersecurity (which contributes to the focus area ‘Boosting the effectiveness of the Security Union’).

Several topics of the sections of the programme addressing ‘Nanotechnologies, Advanced Materials, Biotechnology and Advanced Manufacturing and Processing’ and ‘Space’ also address challenges related to digitisation and contribute to the DT focus area.

ICT in the ‘European Innovation Council’ (EIC) pilot

SME participation is encouraged throughout the work programme and in particular in the priorities ‘Industrial Leadership’ and ‘Societal Challenges’. Dedicated SME support is channelled through the SME instrument (EIC Accelerator), introduced in the Work Programme 2014-2015, which promotes SMEs’ innovation activities from concept to market. In 2016-17, all topics using the SME instrument were grouped in a continuously open common call. For 2018-20, this consolidation is pursued and the support to SMEs through this dedicated instrument takes the form of a single topic with a fully bottom-up approach (still with a continuously open call with four deadlines per year).

Further to the success of its pilot phase, the Fast Track to Innovation (FTI) scheme, which was launched in 2015, is continued and now integrated in the EIC pilot. FTI takes a new approach to give the development of innovations the last push needed before their introduction to the market. It is the only fully bottom-up measure in Horizon 2020 promoting close-to-market innovation activities and open to all types of participants.

FET Open has also become part of the EIC pilot (as EIC Pathfinder), with a simplified call text and the three following points for the expected impact:

- Scientific and technological contributions to the foundation of a new future technology,
- Potential for future social or economic impact or market creation,
- Building leading research and innovation capacity across Europe by involvement of key actors that can make a difference in the future, for example excellent young researchers, ambitious high-tech SMEs or first-time participants to FET under Horizon 2020.

The EIC pilot also comprises a series of inducement prizes, out of which notably one on ‘Blockchains for Social Good’ and another one on ‘Affordable High-Tech for Humanitarian Aid’.

2 COM(2016) 180 : Digitising European Industry - Reaping the full benefits of a Digital Single Market
ICT in ‘Societal challenges' 

Digitisation was retained as one of the five main political drivers to be taken into account in the design of WP2018-20, which led to the development of a major focus area dedicated to this priority (DT - ‘Digitising and transforming European industry and services’) and a further strengthening of the integration of the support to ICT-related R&I activities across LEIT and societal challenges (in continuation of the work initiated with the focus area on ‘Internet of Things’ of WP2016-17).

Information and communication technologies also play an essential role in the focus area addressing security (SU - ‘Boosting the effectiveness of the Security Union), which notably covers cybersecurity and aims at bringing security-related research closer to other policies and societal challenges in the parts of H2020 where they belong.

ICT contributions are expected in each of the seven societal challenges in Horizon 2020:

- SC1: Health, demographic change and wellbeing,
- SC2: Food security, sustainable agriculture and forestry, marine and maritime and inland water research and the bioeconomy,
- SC3: Secure, clean and efficient energy,
- SC4: Smart, green and integrated transport,
- SC5: Climate action, environment, resource efficiency and raw materials,
- SC6: Europe in a changing world - Innovative, inclusive and reflective societies,
- SC7: Secure societies - Protecting freedom and security of Europe and its citizens.

In the societal challenges ICT is addressed through either specific topics or calls or as part of a broader set of contributing technologies in the description of the targeted activities.

1. SC1 - Health, demographic change and wellbeing

ICT, which does have a prominent role in this societal challenge, is addressed mainly in two dedicated calls:

- ‘Digital transformation in Health and Care’,
- ‘Trusted digital solutions and Cybersecurity in Health and Care’.

A few topics from the third call of this part of the work programme, ‘Better health and care, economic growth and sustainable health systems’, notably in its parts dedicated to ‘personalised medicine’ and ‘Supporting the digital transformation in health and care’ also include aspects related to ICT in their scope.

2. SC2 - Food security, sustainable agriculture and forestry, marine and maritime and inland water research and the bioeconomy

With the “digital revolution” being considered as one important driver of innovation in the areas covered under this part of the programme, the number of topics for which the contribution of ICT proves relevant has increased significantly compared with previous work programmes.

In addition to the two topics of the DT focus area presented in the LEIT-ICT part which address digital technologies for agriculture and rural development, each of the four calls of this part of the programme comprises ICT-relevant topics (some of which contributing to the focus area):

- ‘Sustainable Food Security’,
- ‘Blue Growth’,
- ‘Rural Renaissance’,
- ‘Food and Natural Resources’.
3. SC3 - Secure, clean and efficient energy

The strategy outlined in the communication entitled ‘Accelerating Clean Energy Innovation’ adopted in November 2016 was a key input to the development of this part of the work programme. As this strategy clearly emphasizes the essential role of ICT to address the four innovation priorities in the area of energy (buildings, renewables, storage and electro-mobility), ICT-relevant topics can be found in the six following parts of the unique call of SC3, ‘Building a low-carbon, climate resilient future: secure, clean and efficient energy’:

- ‘Energy efficiency’,
- ‘Buildings in energy transition (B4E)’,
- ‘Global leadership in renewables’,
- ‘Smart and clean energy for consumers’,
- ‘Smart citizen-centred energy system’,
- ‘Smart Cities and Communities’.

These topics complement other topics on ICT for energy which contribute directly to the DT and SU focus areas and are published under the LEIT-ICT and SC7 parts respectively.

4. SC4 - Smart, green and integrated transport

One of the three calls of this part of the programme is dedicated to ‘automated road transport’ and fully contributes to the DT focus area. The two other calls also include topics for which the contribution of ICT clearly proves relevant:

- ‘Mobility for growth’,
- ‘Green vehicles’.

5. SC5 - Climate action, environment, resource efficiency and raw materials

Both of the two calls of this societal challenge contains topics where the contribution from ICT can prove relevant:

- ‘Greening the economy in line with the Sustainable Development Goals (SDGs)’,
- ‘Building a low-carbon, climate resilient future: climate action in support of the Paris Agreement’.

6. SC6 - Europe in a changing world - Innovative, inclusive and reflective societies

This societal challenge provides a significant contribution to the DT focus area. ICT-related topics can be found in each of the three main calls proposed for 2018-20:

- ‘Migration’,
- ‘Socioeconomic and cultural transformations in the context of the fourth industrial revolution’,
- ‘Governance for the future’.

7. SC7 - Secure societies - Protecting freedom and security of Europe and its citizens

This part of the work programme is structured around four calls out of which three are particularly relevant for ICT:

- ‘Protecting the infrastructure of Europe and the people in the European smart cities’, which contains topics cutting across physical and cyber-security,
- ‘Artificial Intelligence and security: providing a balanced assessment of opportunities and challenges for Law Enforcement in Europe’, which addresses the challenges and opportunities offered by AI in Law Enforcement,

The third call of this part of the work programme, entitled ‘Security’, also contains a few topics of relevance to ICT.
Important disclaimer

This document presents an overview of ICT-related activities to be supported in the work programme 2018-2020 of Horizon 2020.

Readers should refer to the official version on the Horizon 2020 Programme published on the Horizon 2020 website and on the Participant Portal (http://ec.europa.eu/research/participants/portal), notably for the call conditions.
## Annex - Detailed list of topics

Note: For deadlines: - shaded cells in the table correspond to two-stage calls, - dates are in format dd/mm/yy.

Exploiting the full potential of in-silico medicine research for personalized diagnostics and therapies in cloud-based environments

Prototyping a European interoperable Electronic Health Record (EHR) exchange

Scaling up the unique Social Identification of Medicinal Products

Digital health and care services

Large Scale pilots of personalised & outcome based integrated care

Pre-commercial Procurement for Digital Health and Care Solutions

Supporting investment in smart living environments for ageing well through certification

Support for the large scale uptake of open service platforms in the Active and Healthy Ageing domain

Support to further development of international cooperation in digital transformation of health and care

Digital health and care services - support for strategy and (early) adoption

Support to a Digital Health and Care Innovation initiative in the context of Digital Single Market strategy

Coordination and Support to better data and secure cross-border digital infrastructures building on European capacities for genomics and personalised medicine

Support for European eHealth Interoperability roadmap for deployment

Scaling up innovation for active and healthy ageing

Supporting deployment of eHealth in low and lower middle income countries in Africa for better health outcomes

Smart and healthy living at home

AI for Genomics and Personalised Medicine

AI for Health imaging

Toolkit for assessing and reducing cyber risks in hospitals and care centres to protect privacy/data/infrastructures

Raising awareness and developing training schemes on cybersecurity in hospitals

Personalized Nutrition

Food Cloud demonstrators

ERANETs in agri-food

Blue Bioeconomy Public-Public Partnership

Sustainable European aquaculture 4.0: nutrition and breeding

Socio-economic impacts of digitisation of agriculture and rural areas

ICT Innovation for agriculture - Digital Innovation Hubs for Agriculture

Enabling the farm advisor community to prepare farmers for the digital age

Digital solutions and e-tools to modernise the CAP

Developing long-term monitoring and evaluation frameworks for the Common Agricultural Policy

Secure, Clean and Efficient Energy

Building a low-carbon, climate resilient future: secure, clean and efficient energy

Energy efficiency
Building a Low Carbon, Climate Resilient Future: Low-Carbon and Sustainable Transport

Mobility for growth

Safe, integrated and resilient transport systems

Global leadership and competitiveness

Accounting for the people

Blue growth
